

Automatic Net Sleeving Machine GKV 3300

The automatic sleeving machine GKV 3300 is being used for the mechanical loading of extruded netting material coming from a roll, onto filling tubes having a max. diameter of 160mm and a max. length of 1000mm. The machine is designed to run standard net rolls having a width of 310mm, an outer Ø of max. 300mm and an inner core Ø of 75mm.

- 2 electrically driven feeding rollers to load the net onto the tube
- Speed of the feeding rollers adjustable by frequency inverter
- Pressure of the rollers pneumatically adjustable
- Automatic feeding stop if netroll is empty
- Usable for netting tubes with a Ø range from 50mm to 160mm

Technicl data	Controls	free prog. electronic control
	Electrics	400V 50Hz
	Air supply	7 bar

Special executions are possible

The manufacturer reserves the right to carry out any modifications without previous notice.
