

Automatic Filling und Sealing Machine for prefabricated pouches

Automatic filling and sealing machine (linear design) for prefabricated single pouches. The machine is available in different executions, depending on the kind of the pouches, the pouch dimensions and the filling weight. The pouches are being picked up from the pouch infeed conveyor or magazine by means of vacuum cups and transferred to the receiving station in the machine. In the different stations the pouches are being opened, filled and closed in the heat seal station.

Suitable for the following pouch types:

Flat pouch, Stand-up pouches, Four-side sealed pouch, Gusset pouch, Special pouch, with or without Zipper.

Depending on the execution of the machine, pouches with a filling weight of up to 5 Kg can be used, the pouch dimensions are between 80mm and 400mm width and the pouch length between 100mm and 500mm.
